GREENWOOD® RECYCLED HDPE PLASTIC LUMBER

Eagle One's GREENWOOD® Recycled Plastic Lumber outperforms most other materials in areas subject to harsh environmental weather conditions. The high-density polyethylene (HDPE) plastic, recycled from milk bottles, does not suffer from the problems associated with wood, metal and other materials. It is impervious to insects and most chemicals; does not splinter, rot, or decay; will not mold, mildew or grow fungus; and never needs painting or staining. The dura-membrane exo-skin is dent, scratch, and graffiti resistant. The color is UV protected and blended throughout the lumber making it resistant to color fading.
